

AMENDMENTS TO THE CLAIMS:

The listing of claims will replace all prior versions, and listings, of claims in the application.

LISTING OF CLAIMS:

1-67. (CANCELLED)

Listing of Claims:

1-67. (Cancelled)

68. (Currently Amended) An isolated nucleic acid molecule that is selected from the group consisting of:

(i) a nucleic acid sequence that encodes a polypeptide having at least 90 % sequence identity to the polypeptide contained in SEQ ID NO:2 and which specifically binds to a bitter ligand that specifically binds the T2R76 polypeptide contained in SEQ ID NO:2;

(ii) a nucleic acid sequence that comprises the sequence contained in SEQ ID NO:1;

(iii) a nucleic acid sequence derived from the human genome that hybridizes under wash stringency conditions to the nucleic acid sequence contained in SEQ ID NO:1 when incubated for 15 minutes in 0.02X SSC at 65 degrees C and which encodes a taste receptor polypeptide that specifically binds to a bitter ligand that specifically binds to the T2R76 polypeptide contained in SEQ ID NO:2; or

(iv) a nucleic acid sequence ~~differing~~ differing by at least one functionally equivalent codon from the isolated nucleic acid sequences recited in one of (a), (b) or (c) above which

encodes a bitter taste receptor polypeptide that specifically binds a bitter ligand that specifically binds to the T2R76 polypeptide contained in SEQ ID NO:2.

69. (Previously Added) The isolated nucleic acid sequence of claim 68 which encodes a polypeptide that possesses at least 95% sequence identity to the polypeptide contained in SEQ ID NO:2 and which specifically binds to at least one bitter ligand specifically bound by the T2R76 polypeptide contained in SEQ ID NO: 2.

70. (Previously Added) The isolated nucleic acid sequence of claim 68 which encodes a polypeptide having at least 95-99% sequence identity with the T2R76 polypeptide contained in SEQ ID NO: 2 and which polypeptide specifically binds at least one bitter specifically bound by the T2R76 polypeptide contained in SEQ ID NO:2.

71. (Currently Amended) The isolated nucleic acid sequence of claim 68 which comprises the sequence ~~contained~~ contained in SEQ ID NO: 1.

72. (Previously Added) The isolated nucleic acid sequence of claim 68 which encodes a polypeptide comprising the sequence contained in SEQ ID NO: 2.

73. (Previously Added) The isolated nucleic acid sequence of claim 68 which is selected from the group consisting of an mRNA, cRNA, cDNA and genomic sequence.

74. (Previously Added) The isolated nucleic acid sequence of claim 68 which is operably linked to at least one sequence that regulates the expression of said sequence in a heterologous host cell.

75. (Previously Added) The isolated nucleic acid sequence of claim 68 which is comprised in an expression vector.

76. (Previously Added) The isolated nucleic acid sequence of claim 75 wherein said vector is selected from the group consisting of a plasmid, cosmid, bacteriophage, transposon-mediated transformation vector and virus.

77. (Previously Added) The isolated nucleic acid sequence of claim 77 wherein the vector is a retroviral vector.

78. (Previously Added) The isolated nucleic acid sequence of claim 77 wherein the vector is a plasmid.

79. (Previously Added) The isolated nucleic acid sequence of claim 68 which is operably linked to a regulatable promoter.

80. (Previously Added) The isolated nucleic acid sequence of claim 68 which is operably linked to a constitutive promoter.

81. (Previously Added) The isolated nucleic acid sequence of claim 78 wherein said plasmid further comprises a sequence encoding a G protein that functionally couples to the T2R76 polypeptide encoded by said isolated sequence.

82. (Previously Added) The isolated nucleic acid sequence of claim 81 wherein said G protein is a promiscuous G protein.

83. (Previously Added) The isolated nucleic acid sequence of claim 81 wherein said G protein is selected from the group consisting of Galpha15, Galpha16, Gq, gustducin and transducin.
84. (Previously Added) The isolated nucleic acid molecule of claim 68 which further comprises a sequence that encodes a detectable marker.
85. (Previously Added) An isolated host cell that has been transfected or transformed with an isolated nucleic acid sequence according to claim 68.
86. (Previously Added) The isolated host cell of claim 85 which is a eukaryotic cell.
87. (Previously Added) The isolated host cell of claim 85 which is selected from the group consisting of mammalian cells, insect cells, amphibian cells, bacterial cells, and yeast cells.
88. (Previously Added) The isolated host cell of claim 85 which is selected from the group consisting of an HEK-293 cell, CV-1 cell, HeLa cell, COS cell and a Sf9 cell.
89. (Previously Added) The isolated host cell of claim 85 which is a human cell.
90. (Previously Added) The isolated host cell of claim 88 which is a HEK-293 cell.
91. (Previously Added) The isolated host cell of claim 85 which further expresses a G protein that functionally couples with the T2R76 polypeptide encoded by said isolated nucleic acid sequence.

92. (Previously Added) The isolated host cell of claim 85 which further expresses another T2R polypeptide.
